INDUSTRIAL VACUUMS

## SUCTION UNIT

Suction is generated by one carbon brush by-pass motor activated by independent switches located on a solid metal head that protects the motor from possible blows and ingress of external bodies, keeping the noise level to a minimum.

## FILTER UNIT

The polyester bag filter, placed inside the filter chamber, guarantees a large filtering surface area and high resistance to dust passage and clogging.

## COLLECTION UNIT

The vacuum cleaner consists of a stainless steel drum with impact protection around the container equipped with swivelling wheels. It is possible to bag the dust directly in black waste bags.
