# DEDUST 8 Dust collection system for suspended dusts

AIR FILTRATION SOLUTIONS

## SUCTION UNIT

The suction unit is an electric fan that provides the system with a high air flow.

## FILTER UNIT

The antistatic polyester stellar filter, placed inside the filter chamber, guarantees a large filtering surface area and high resistance to dust passage and clogging.

The filter is equipped with an automatic cleaning system: an electro-pneumatic cylinder periodically shakes the pocket filter by means of a rapid vertical movement, causing the separation of any dust and material that may have accumulated on the filter. The frequency and duration of the cleaning cycle can be set using the timers on the electrical panel.

## COLLECTION UNIT

The steel container is equipped with a quick release system that allows for quick disposal of the vacuumed material.

## OPTIONALS

- ✓ Absolute hepa filter h13 efficiency 99.95%
- ✓ Spark trap kit
- ✓ Kit for air outlet fan
